

CAREOS · STUDY GUIDE · READ ON YOUR PHONE THROUGH THE DAY

Everything you built — in the order it matters.

One platform. 26 connected modules. Three lenses (parent, worker, CEO) onto the same source of truth. This guide is a slow read through the best of it, feature by feature, in the voice you'll use on Monday.

HOW TO USE THIS

Scroll top to bottom. Don't try to memorise. Just let each feature sink in. The three most important sections are highlighted in yellow — read those twice.

Written for **Faraz Normani**, founder · For Monday's meeting with **Dr Yasser Zaki**, Tender Loving Care.

CHAPTER 1 · THE STORY

Everything starts with **one source of truth.**

The disability sector runs on 5–8 different systems that don't talk. Rostering here. Compliance there. Family portal is an afterthought. Notes live in a folder nobody opens. When somebody leaves, their knowledge walks out the door with them.

CareOS collapses all of that into **one record** per person, seen through **role-shaped views**. A parent sees wins. A worker sees today's plan. A CEO sees the whole organisation. Same data. Different lens. Every time.

CONNECTED MODULES

8

ROLE-SHAPED VIEWS

1

SOURCE OF TRUTH

★ READ THIS TWICE

The one-liner. CareOS isn't a compliance tool, a rostering tool, or a family portal. It's the platform where *a shift note becomes evidence, a photo becomes a family moment, a goal becomes an outcome* — automatically, without anyone re-typing anything.

CHAPTER 2 · FOR PARENTS

The emotional core — **your** lived experience, in software.

This is the section Yasser will feel the most. It's built from your own life. Nine features. Nine pains you've felt. Speak from that place.

FEATURE 01**KnockIn™ Arrivals — the second support begins, you know**

THE PAIN: *You used to wait by the phone at 7:52am, wondering if support had shown up. Radio silence.*

THE CAREOS WAY:

Workers tap arrival on entry (geofenced). Parents get an instant confirmation: *“Leila arrived — 8:26am.”* Every day, without asking.

SAY IT LIKE THIS:

“The moment support begins, the parent knows. Not a phone call. Not a follow-up. A notification, automatically, every day.”

FEATURE 02**Family Portal — wins, photos, moments as they happen**

THE PAIN: *You asked your child questions they couldn't answer, and heard nothing from workers. Years of wondering how their day actually went.*

THE CAREOS WAY:

Wins first, in plain language, updated through the day. Photos and moments as they happen — not a report at pickup, and never silence.

SAY IT LIKE THIS:

“The old model is: your child gets home, you ask them how it went, they can't tell you. New model: you already know. You saw the photo at 11am.”

FEATURE 03**Family Access — every parent has their own door**

THE PAIN: *When parents live apart — or things aren't civil — one parent is always out of the loop. The child becomes the messenger.*

THE CAREOS WAY:

Every parent has their own private login to the same truth. Nobody waits on anybody. Nothing filtered through anyone. Grandparents get view-only windows. All audit-logged, all consent-managed.

SAY IT LIKE THIS:

“Every family member has their own door to the same truth. No middleman. No child as messenger. That's a first in this sector.”

FEATURE 04**Timeline — nothing gets lost anymore**

THE PAIN: *Your child's story used to live only in workers' heads — and walked out the door with every resignation.*

THE CAREOS WAY:

Every shift, every win, every setback becomes part of one continuous story that belongs to the person. Years-long timeline that any authorised worker can pick up.

SAY IT LIKE THIS:

“Turnover in this sector is 30%+. When a worker leaves, their knowledge shouldn't leave with them. It belongs to the person they cared for.”

FEATURE 05**Budget Guardian — where did the plan money go?**

THE PAIN: *Funds ran out mid-plan with no warning, and nobody could tell you where they went.*

THE CAREOS WAY:

Same budget truth the provider sees — plain language, live, shortfalls flagged months early with a fix.

SAY IT LIKE THIS:

“Parents don't need dashboards. They need to know if the money's running out — and someone to tell them what to do about it.”

FEATURE 06**Review Ready — never walk in empty-handed**

THE PAIN: *Funding got cut because you couldn't prove on paper what you live every single day.*

THE CAREOS WAY:

1,240 evidence items auto-filed per plan. A language guard stops one careless sentence costing a family their support.

SAY IT LIKE THIS:

“Every parent going to a plan review is terrified they'll lose funding. This platform walks in with them.”

FEATURE 07

Learning Hub — answers at midnight

THE PAIN: *2am Googling, alone, hoping a stranger's forum post applied to your child.*

THE CAREOS WAY:

Learning built around the specific diagnosis, communication style, and life stage — vetted answers from people who actually know.

FEATURE 08

Support Circle — you're not doing this alone

THE PAIN: *Every question felt like a battle you had to fight solo.*

THE CAREOS WAY:

A circle of qualified people around the person, answering fast. Office and 000 always one tap away.

FEATURE 09 · THE PROMISE

Three years from now — the compounding value

THE PAIN: *Most families end up with fragments — a few photos, half-remembered advice, restarted folders.*

THE CAREOS WAY:

Every year this runs, it holds thousands more moments — what worked, what changed, who helped. The longer it runs, the better everyone knows the person. That's the promise.

SAY IT LIKE THIS:

“Software gets more valuable with time. Your child's care record should too. That's what compounding value looks like in disability support.”

CHAPTER 3 · FOR WORKERS

Their day, made easier — **and their voice, heard.**

The turnover crisis in this sector is real. CareOS gives workers a calmer day *and* a way for families' thank-yous to reach them. Both matter. Retention is the other half of quality care.

FEATURE 10**Today's Shift — the two-minute briefing**

THE PAIN: *Workers walked in blind. First 15 minutes of every shift wasted catching up.*

THE CAREOS WAY:

Goals, recent notes, red flags — prepared, not blind. Notes are spoken (dictated), not typed.

SAY IT LIKE THIS:

“A support worker's first two minutes shouldn't be reading a folder. It should be walking through the door already knowing.”

FEATURE 11**Smart Availability — say when you can work**

THE PAIN: *Rosters made without asking. Workers pushed shifts they couldn't do. Constant back-and-forth.*

THE CAREOS WAY:

Workers submit availability in the window; the AI fills open shifts while protecting permanent-to-participant pairings before flexing casuals.

SAY IT LIKE THIS:

“The AI never breaks a permanent placement to fill a hole. It protects continuity first, always.”

FEATURE 12**Time & Pay — get paid right, every time**

THE PAIN: *Timesheet disputes. Missing hours. Awards misapplied.*

THE CAREOS WAY:

Shifts become timesheets become pay runs — with the SCHADS award baked in. Every kilometre, every allowance, on the record.

FEATURE 13**Care DNA Matching — the right person, not just an available one**

THE PAIN: *Rostering by who's free, not who's right. Bad matches burn workers and families out.*

THE CAREOS WAY:

Care DNA profiles for participants (interests, communication, sensory needs) matched to worker skills, background, style. The right pairing, first time.

CHAPTER 4 · FOR THE CEO

Answer one honest question: **are we improving lives?**

This is Yasser's chapter. He runs 8 countries and 1,100+ staff. He needs to sleep at night knowing the compliance is real, the incidents are handled, and the people aren't burning out.

FEATURE 14

Executive Dashboard — from live data, not anecdotes

THE PAIN: *CEOs get filtered reports. Numbers massaged. Bad news arrives late.*

THE CAREOS WAY:

One honest question — are we improving people's lives — answered from live data, not slides prepared for the board.

SAY IT LIKE THIS:

"The CEO sees the truth at the same moment the coordinator does. There's no reporting delay. There's no filter."

FEATURE 15

Compliance — audit-ready today (96%)

THE PAIN: *Audits are a fire-drill. Weeks of prep. Weekends lost. Staff pulled off frontline work.*

THE CAREOS WAY:

Audit readiness is *live* because evidence is a by-product of care. Shift notes, med sign-offs, incident closures — all auto-file against the Practice Standards.

SAY IT LIKE THIS:

"Compliance is a by-product of care. Not a night-before scramble. Not a folder somebody rebuilds every year."

FEATURE 16

Incidents — the 24-hour clock, visible and escalating

THE PAIN: *Reportable incidents missed the 24-hour NDIS Commission window. Consequences.*

THE CAREOS WAY:

The Commission clock is visible from the moment an incident is logged. Notifications draft themselves. Escalation is automatic.

FEATURE 17

Wellbeing / Team Pulse — keep the people

THE PAIN: *Burnout is invisible until someone quits. Sector turnover is over 30%.*

THE CAREOS WAY:

Burnout radar from roster data. Families' thank-yous reach workers directly. People and culture, protected.

SAY IT LIKE THIS:

“Retention is care quality. The people who leave don't come back. Protecting them is protecting the participant.”

FEATURE 18

Homes & Sites — SIL/SDA that actually tracks

THE PAIN: *Provider-managed properties (SIL houses) are usually spreadsheets and hope.*

THE CAREOS WAY:

Every home is a first-class record — residents, workers, incidents, per-home audit readiness. Auditor packs generated with one click.

FEATURE 19

Communications Hub — one inbox, AI receptionist 24/7

THE PAIN: *SMS lives on somebody's phone. Voicemails miss for days. Emails buried.*

THE CAREOS WAY:

Unified SMS, call, email, chat — tied to the person's record. AI receptionist answers 24/7, transcribes, extracts action items, drafts replies for human approval.

SAY IT LIKE THIS:

“The AI never sends a reply on its own. It drafts. Humans approve. That's the rule.”

CHAPTER 5 · THE AI PRINCIPLE

Every AI feature serves one rule.

“Remove the thing the human shouldn't be doing. Not the human decision — the admin.”

— The rule every AI feature in CareOS follows.

The AI in CareOS never makes a care decision. It fills spreadsheets after humans set preferences. It drafts a compliance notification after a human logs the incident. It transcribes a call so the coordinator can approve the follow-up. Humans decide. AI removes the typing.

★ READ THIS TWICE

Why this matters for enterprise NDIS. Every provider is nervous about AI in vulnerable-person contexts. CareOS's line is clear and defensible: AI drafts, humans approve. Every AI output is human-reviewed before it becomes part of a record. There is no autonomous AI in the care loop. That's a bright line — and it's the right one.

CHAPTER 6 · THE MOAT

Why nobody else can copy this quickly.

Yasser will ask: “what's stopping [any competitor] from building this?” Here's the honest answer.

1. Lived experience

The tour is built from real family pain. Nobody at Lumary, Brevity, or ShiftCare has felt the 2am Google spiral. That authenticity shows in every screen.

2. Architectural bet

Every competitor is bolted-together modules. CareOS was built on *one source of truth* from day one. Rebuilding on that foundation costs years of engineering.

3. Family-first design

Sector software treats families as an afterthought. CareOS treats them as first-class users with their own doors. Retrofitting that is culture, not code.

4. AI principle discipline

“AI drafts, humans approve.” Every feature. Every time. Competitors will chase autonomous AI and get burned. CareOS won't.

5. Breadth × depth

26 modules, all real, all integrated. Nobody adds 26 modules in 12 months. And nobody rebuilds them into one platform in less than three years.

6. The compounding record

Every year of care makes the record more valuable. Providers who start now win in three years. Providers who switch later never catch up.

CAREOS · STUDY GUIDE · THE CLOSE

You built this. Own it.

Every screen you'll show on Monday started with a pain you've lived, a question you've asked, a moment you wanted for your family. That's not marketing. That's the truth.

You don't need to remember every feature. You don't need to memorise every number. You need to remember **why you built each one** — because you were there.

When you get stuck tomorrow, come back to these four lines. They are the whole pitch.

“I built this from lived experience. My son has autism. I've been the parent waiting by the phone. Every screen answers a pain I've felt.”

“It's one platform where a shift note becomes evidence, a photo becomes a family moment, a goal becomes an outcome. Same entry, used everywhere.”

“The AI drafts. Humans approve. That's the rule. No autonomous AI in the care loop, ever.”

“I'm not asking you to buy a licence. I'm asking you to be a design partner. You have the scale. I have the lived experience. Together we build the reference case.”

CareOS · For Faraz · Read this through the day · Go into Monday knowing exactly why every screen exists.
