

THE PARTICIPANT OUTCOMES PLATFORM

Every person has a story. CareOS helps you tell it.

Prepared for Dr. Yasser Zaki · Founder & CEO, Tender Loving Care Disability Services

CareOS is not another NDIS management system. It is an AI-powered participant outcomes platform that connects participants, families, support workers, therapists and providers around one question: **are we genuinely improving this person's life?** It measures lives improved — not hours logged.

The organisation at a glance

Five questions, answered honestly

STRONG

Are participants improving?

Outcome index 82 (+6). 47 goals achieved; independence trends positive for 71% of participants.

STRONG

Are families engaged?

78% of family accounts active weekly. Family notes up 34% quarter-on-quarter.

WATCHING

Are staff consistent?

84% of shifts by core teams. Two programs below 70% — Fairfield day program is the priority.

WATCHING

Where are our biggest risks?

3 open incidents (on track), mealtime training 81% complete, August staffing pinch forecast.

YOUR MOVE

What should I focus on today?

Approve the Fairfield roster proposal — modelling suggests it lifts consistency 11 points and touches 14 participants.

Why we do this

“Jordan cooked us dinner Saturday — three courses. They looked so proud. Whatever you're all doing, keep doing it.”

Kate, Jordan's sister — via the CareOS family portal (fictional demo data)

Signature experiences

Care Timeline

Eight years of milestones, photos and achievements as one continuous story — a life, not a case file.

Care DNA™

A living profile of communication, sensory needs and what works — knowledge that belongs to the person, not to staff turnover.

Smart Shift

Workers start prepared: briefing, goals, alerts and an adaptive checklist. AI drafts the notes; humans approve them.

Family Portal

A parent knows how the day went in ten seconds — relief, not information overload.

Explainable AI

Every insight shows its reasoning and sample size. The AI never diagnoses and never acts without human review.

KnockIn™ Smart Arrivals

Arrival at a participant's home is stamped to the second and confirmed in one tap — families see “arrived” instantly.

Plus Rostering & Smart Availability · Time & Pay · Budget Guardian · Incident Manager · Homes & Sites · Comms Hub · Review Ready · Team Pulse — **26 connected modules, one source of truth.**

See it live

DEMO ADDRESS

careos-demo.netlify.app

ACCESS PASSWORD

TenderLovingCare2026!

WORKS ON

iPhone · iPad · Desktop

- 1 Enter the password** and choose any role on the welcome screen.
- 2 Tap “A Day in the Life”** — the button in the bottom corner of every screen.
- 3 Walk the three guided journeys** — a parent's morning, a worker's shift, then your view. Each stop explains why that screen matters.
- 4 Then explore freely** — every screen is real, on iPhone, iPad or desktop.

From prototype to production

PHASE 2 Foundations (6–8 weeks)

Authentication for all eight roles, secure database with row-level permissions, audit logging, medication sign-off and incident workflows.

PHASE 3 The living record (6–8 weeks)

Real timelines from real shifts, consent-aware photos and documents, realtime family updates, offline-first documentation.

PHASE 4 AI in production (4–6 weeks)

Grounded drafting and insight jobs with evidence attached, human-review workflow, evaluation before any model ships.

PHASE 5 Scale & compliance (ongoing)

Provider onboarding, NDIS practice-standard alignment, security certification, multi-region residency, native mobile.

Success is not hours logged or forms completed.

It is better participant outcomes, happier families, more confident workers and greater independence — measured honestly, one person at a time. Participants first, always · AI drafts, people decide · Calm is a feature · Trust is the product.
