

The way the world supports people with disability is about to change.

This is CareOS.

An AI-powered participant outcomes platform — built so participants, families and support teams finally work from one living story, and providers measure what actually matters: lives improved.

Prepared for Dr. Yasser Zaki · Founder & CEO, Tender Loving Care Disability Services · July 2026

THE PROBLEM

The industry runs on paperwork. People run on **stories**.

Families are left wondering.

“How was their day?” shouldn't require chasing phone calls. Most families get visibility only when something goes wrong.

Knowledge walks out the door.

What calms someone, how they communicate, what makes them light up — it lives in workers' heads and leaves when they do.

Workers drown in admin.

Hours of shift notes written after exhausting days — time and energy taken directly from the people being supported.

Providers measure hours, not outcomes.

Systems count shifts delivered and forms completed. Nobody's dashboard answers the only question that matters: is this person's life getting better?

Stop measuring hours. Start measuring lives.

The participant at the centre

Every person gets a living Care DNA™ profile and a beautiful continuous timeline of their whole journey — strengths first, never reduced to a diagnosis.

Everyone on one page

Families, workers, therapists and leaders see one shared truth, shaped by role-based permissions and audit-logged trust.

AI that serves people

Drafts notes, spots patterns, explains its reasoning — and never touches a record without human review. People stay the hero.

Six experiences that feel like the future.

Care Timeline

Eight years of milestones, photos and achievements as one scrolling story. A life, not a case file.

Care DNA™

A living profile of communication, sensory needs and what works — knowledge that belongs to the person forever.

Smart Shift

Workers start prepared: briefing, goals, alerts, adaptive checklist. AI drafts the notes; humans approve.

Family Portal

A parent knows how the day went in ten seconds. Relief, not information overload.

Explainable AI

Every insight shows its evidence and sample size. Never diagnoses. Never acts alone.

Executive View

“Are we genuinely improving lives?” — answered on one screen, every number two clicks from the person behind it.

8

roles, each with their own experience

Ops built in

Rostering · Compliance · Billing & NDIS claims

25+

connected screens · phone, tablet, desktop

WCAG

accessibility-first, dark mode included

SEE IT LIVE — RIGHT NOW

Don't take the deck's word for it. **Open it.**

DEMO ADDRESS

careos-demo.netlify.app

ACCESS PASSWORD

Tenderlovingcare2026!

WORKS ON

iPhone · iPad · Desktop

Scan with your phone camera,
enter the password, step inside.

- 1

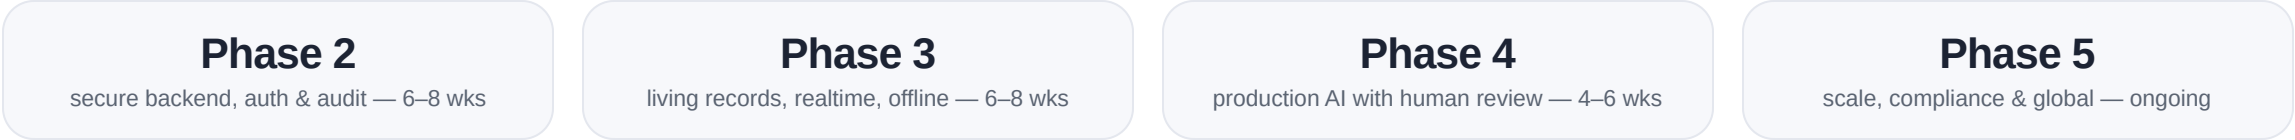

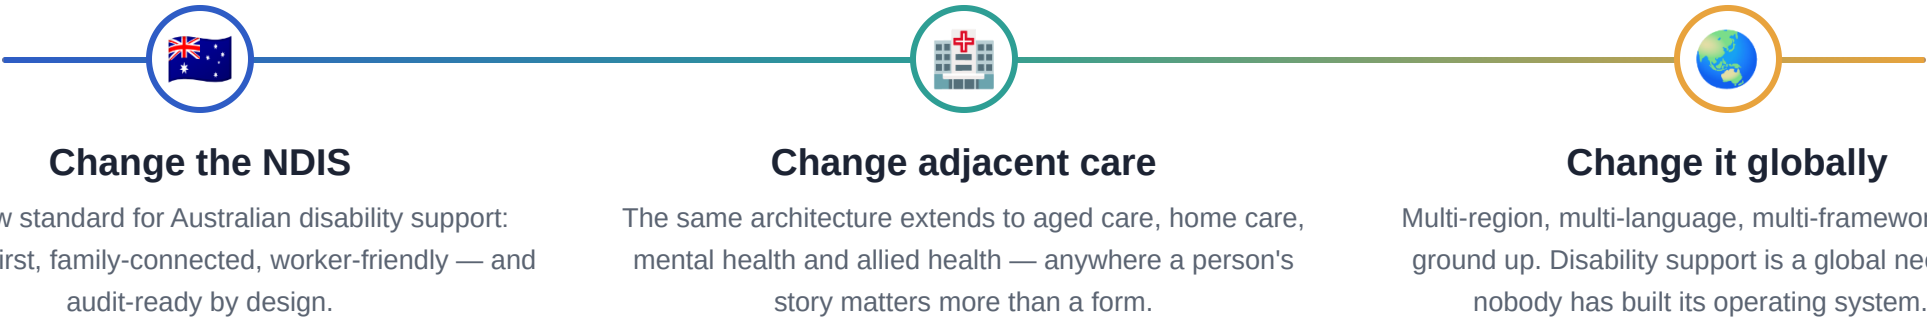

Choose “CEO” — your dashboard opens with the five questions every chief executive asks.
- 2

Open Milo's Timeline — eight years of a life in one scroll.
- 3

Switch to Parent — a father of two autistic boys, reassured in ten seconds.
- 4

Support Worker → Today's Shift — tap “Draft with AI” and watch the paperwork disappear.

Built for the NDIS. Designed for the world.

Every person has a story. Let's change how the world tells it.

The demo is live. The roadmap is real. The first provider to lead with outcomes won't just keep up with the industry — it will define it.
